

AOS SERVICE

AOS offers maintenance plans and services for kitchen exhaust filtration systems, both new and old and other branded systems.

This includes electrostatic air cleaners, UV systems, activated carbon filtration, misters and ozone generators. If a kitchen exhaust filtration system is not properly maintained, it can cause a fire and is an important risk management issue for any business.

ESP CELL MAINTENANCE

All electrostatic cells and pre filters require regular cleaning to ensure clean exhaust air is exhausted to atmosphere.

LATEST CLEANING TECHNOLOGY

For the purpose of cleaning the electrostatic air cleaners, AOS has invested significantly in the most recent and cutting-edge cleaning technology.

SERVICE PERFORMED BY AUTHORISED AOS SERVICEMEN

All services performed by a
trained maintenance AOS
technician

PICK UP / RETURN PROGRAM

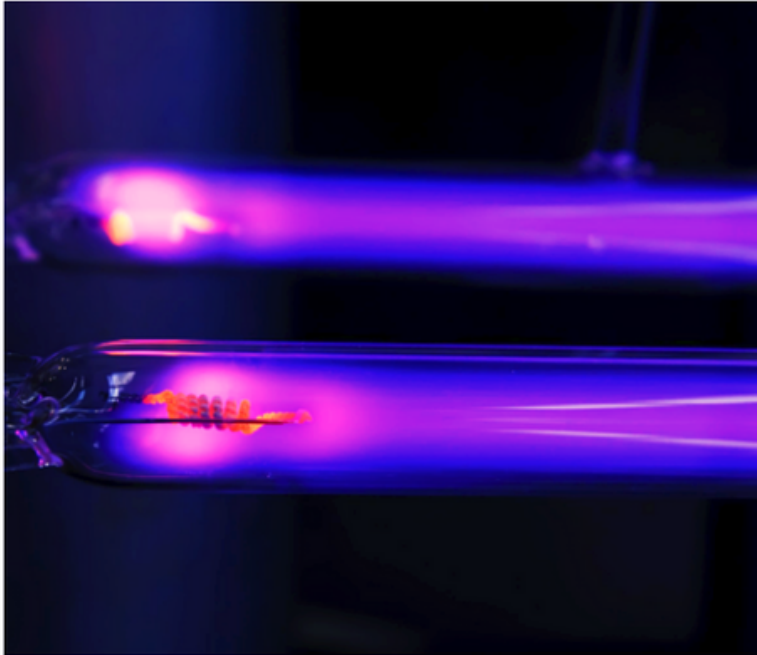

If our exchange
programme does not work
for your equipment, we can
still assist you.

We will pick up, clean, and
return all dirty parts the
following business day.

We will test the air cleaner
after the clean filters have
been installed.

UV SERVICE

AOS offers UV lamp replacement services, which usually requires regular inspection.

TESTING VOLTAGES & FAULTS ON THE ELECTROSTATIC CELL

After electrostatic cells are cleansed and dried, they are tested for correct voltages in a test rig prior to being delivered to the job site.

REDUCE FIRE RISK

Interval servicing keeps ductwork clean from grease and oil and less chance of fire occurring in the kitchen exhaust system

SPARE PARTS AVAILABLE

AOS Warehouse maintains a large variety of replacement parts in stock for all filtration equipment.
